Ever since we started the design and manufacture of lifejackets 40 years ago safety has been paramount. All our products are thoroughly tested in house before they are sent to an accredited laboratory for CE certification. It is not only the in water properties but all the materials which are also thoroughly tested.

We are often asked which buoyancy aid or lifejacket is the safest. Our response is simple, the one that you wear, not the one that is stowed away in a locker somewhere.

We put a lot of effort into the design, fit and comfort so that it should be a pleasure to wear a life jacket.

Baltic Safety Products AB is a Swedish company located in Västergötland. For these 40 years we have adhered to the philosophy that it is impossible to compromise quality and functionality. This philosophy has made us the largest manufacturer in Europe with distributors in over 50 countries.

As market leader, we are driving the development of safer and more comfortable lifejackets and buoyancy aids for the future.

In our extensive range you can find products for all kinds of activities on water, from watersports and dinghy sailing to paddling and fishing. Of course we also have all-round buoyancy aids and lifejackets too. Our inflatable lifejackets are among the most popular on the market thanks to the fact that they are compact and comfortable. Whatever your plans there is always a lifejacket for your needs.

It is important to remember that inflatable lifejackets are technical products that demand regular inspection and checks. For more information on how to take care of your inflatable lifejacket please read the manual accompanying the product or visit our website.

Flotation clothing like gilet-style vests and jackets are both safe and functional. However if the water is cold it could be a good idea to wear a flotation suit, approved as a buoyancy aid and for thermal protection.

The boating season is soon here so get out on the water and have fun. With a lifejacket from Baltic you have one less thing to think about, safety. We have thought about that for you.

When it comes to your personal safety there is no room for compromise.

## INFLATABLE LIFEJACKETS

Inflatable lifejackets are among the safest product to use when you are out on the water as long as you maintain and care for them correctly. Inflatable lifejackets function using a CO2 cylinder that must be replaced each time the lifejacket has been inflated. The cylinder has no specific expiry date but it should be checked regularly ensuring that it has not been pierced or corroded and is screwed in tightly. The automatic lifejacket has a sensor (cartridge) once fully immersed it activates and inflates the lifejacket. The cartridge should also be checked that it is within the expiry date and screwed on tightly. The cartridge is simple to remove and replace but if in doubt one of our retailers will be able to assist you. All inflatable lifejackets both Manual and Automatic models have a manual pull cord. For more information on care and maintenance of your lifejacket please read the manual accompanying the product.

An inflatable lifejacket must always be the outermost garment, this is to ensure the lifejacket is not constrained from inflating and that water can activate the cartridge.

It is important to adjust the waistband so that the lifejacket fits correctly to the body. A poorly adjusted lifejacket tends to transfer the weight onto the collar, whereas a well-adjusted lifejacket can be worn all day without any discomfort to the shoulders and neck.

Many of our models are available with or without integrated safety harness. On board a sailing boat a lifejacket with integrated safety harness offers the ability to connect a safety line to the lifejackets, especially beneficial in rough conditions or when one moving around the deck. For motor-boats, speedboats or for sport fishing, we recommend a model without safety harness as it is lighter and slightly easier to adjust.

Our most popular model of inflation mechanism is automatic, it ensures that the vest inflates by itself when you fall into the water. Manual inflation lifejackets tend to be used by among others, anglers who stand in flowing water, regatta sailors and rescue personnel who are swimmers, who sometimes require entry into the water without buoyancy.

## HOW THEY WORK

The inflatable lifejacket has a CO2 cylinder connected via an inflation valve fitted to an airtight lung. This valve is either automatic or manually activated. To inflate the lifejacket manually you must pull the inflation cord located at the right hand side. The inflation starts immediately.

An automatic inflatable lifejacket is inflated with CO2 gas activated either manually by pulling the cord or within 3 seconds automatically upon immersion. All lifejackets are equipped with a mouth inflation/deflation tube. After inflation to expel the air from the inflatable lung invert the mouth inflation tube cap,

depress the valve and gently squeeze. The gas in the cylinders is carbon dioxide do not inhale.

N.B! When the lifejacket has been inflated it must be rearmed. Inside your lifejacket you can find information on which spare parts to use. It is the same spare parts to all Baltic 150N lifejackets, CO2 cylinder art no 2433 and automatic cartridge art no 2520. Inside the rearming kit, you will find instructions how to rearm your lifejacket.

## SPARE PARTS & ACCESSORIES

We recommend that you always have at hand spare cylinders and cartridge/capsule (if automatic) for your inflatable lifejackets. See page 49 for more information.

## WHAT LIFEJACKET SHOULD I CHOOSE?

### RACING

Lifejackets in this category are available with additional equipment such as integrated spray hoods and lifejacket lights to meet the current racing requirements. The fit of these lifejacket is excellent and ensures they are comfortable over long periods on watch. Lifejackets in category Racing are not specifically for racing but also perform superbly for cruising or offshore sailing.

### COMFORT

If you require a lifejacket with greater comfort and innovative detailing, one should look at lifejackets in this category. Superb comfort and fit, soft materials and inspection windows are standard in our comfort lifejackets. These lifejackets fit equally well in motorboat or sailboat, inland or offshore.

### VERSATILE

Versatile lifejackets are manufactured from durable materials and all have a fleece collar, removable crutch strap and the option of quick-release buckle or integrated safety harness. You may also select automatic inflation or manual only inflation system.

## WITH OR WITHOUT SAFETY HARNESS

Most of our models are available with and without integrated safety harness. The safety harness is used to attach a safety line to the lifejacket to help prevent falling overboard.

Onboard a motorboat or for sport fishing, we recommend a model without safety harness, as the lifejacket is lighter and easier to adjust. However for safety onboard a sailboat especially when moving around on deck in a seaway it would be beneficial to attach a safety line to the lifejacket. All our lifejackets and safety harnesses are CE marked and approved in accordance with EN / ISO 12402/12401.

## GAS CYLINDER RETAINER

All Baltic lifejackets are fitted with a cylinder retainer to prevent the cylinder from working loose.

## SLA/SL

Models **SLA** (equipped with sprayhood, emergency light and mount for AIS) and **SL** (equipped with sprayhood and emergency light) are approved for international yacht sailing in accordance with World Sailing OSR regulations.

## INFLATABLE LIFEJACKETS RACING

Lifejackets in this category are designed for active sailing and especially to be comfortable to wear for long periods. All lifejackets in Racing category are available with integrated spray hood and lifejacket light to comply with the current international yacht racing regulations.

### AIS/PLB ACCESS

A separat cover zip gives easy access to the AIS/PLB. The inspection window shows the status of the transmitter.

Force SLA auto harness black  
art no 1735

### FITTING

Ergonomic panels front and rear together with a harness in flexible material makes the lifejacket comfortable to wear.

### SAFETY HARNESS

Twin webbing loops for attaching safety line.  
Detachable crutch strap.

Force auto harness black

**Size:** 40-150 kg.

## INFLATABLE LIFEJACKETS / BUOYANCY AIDS **iFLOAT**

The iFloat is our latest development designed to give maximum freedom and comfort. The inflatable lung is stowed in a pocket that can be sited anywhere around the waist. To deploy should you require buoyancy, simply pull the iFloat out of the

### iFLOAT

The iFloat is inflated via a gas cylinder that is activated by a manual pull-cord. The inflatable lung and the mouth inflation/deflation tube as well as the manual gas valve are the same as used in our other inflatable lifejackets. When you fall in the water, pull the iFloat lung out of the waist pouch, place over your head and pull the manual inflation pull-cord. The gas then inflates the lung. Recommended for swimmers only. Buoyancy 150N. Five year guarantee.

**Size:** 60-130 kg.

### SOFTBAG

iFloat Softbag classifies as a buoyancy aid. A soft and slim design makes it comfortable to wear. The iFloat is inflated via a gas cylinder that is activated by a manual pull-cord. The inflatable lung and the mouth inflation/deflation tube as well as the manual gas valve are the same as used in our other inflatable lifejackets. When you fall in the water, pull the iFloat lung out of the waist pouch, place over your head and pull the manual inflation pull-cord. The gas then inflates the lung. Recommended for swimmers only. Buoyancy 150N. Five year guarantee.

**Size:** 40-130 kg.

## LIFEJACKETS

A lifejacket is designed to aid the wearer to turn onto the safe back position and support the head so that the airways are above the surface. Therefore it makes it the obvious choice for all non-swimmers. All Baltic lifejacket models for new-born up to and including 15/20 kg are fitted with a wider crutch strap that can be clicked into two length positions to ensure a perfect fit. Several models have segmented front panels so that they contour to the body and give freedom of movement. A lifejacket has more buoyancy on the front and less on the back, this ensures the lifejacket turns the wearer into the safe back position. The collar of the vest has nothing to do with the actual turning but helps to support the head so that the airways are above the water.

All our lifejackets are equipped with crutch strap, retro-reflective patches and a whistle, and are approved to 100N standard.

There is also a model with integrated safety harness for the little ones, these harnesses are tested and approved according to EN ISO 12401 and have stainless steel D-rings for attaching a safety line.

## LIFEJACKETS

Our lifejackets are thoroughly developed to by margin meet the harsh requirements of the standard.

### RETRO REFLECTIVES

Retro reflectives and high visibility exterior are demanded in the lifejacket standard.

### COLLAR

The lifejacket collar supply support for the head to keep the nose and mouth well above the water line.

### TURNING

The front of a lifejacket has greater buoyancy than the rear, which ensures a safe turning to the back for the user.

### CRUTCH STRAP

All lifejackets are equipped with an adjustable crutch strap for a safe fit.

## LIFEJACKETS

### LIFT HANDLE & WHISTLE

All the smaller sizes of Baltic lifejackets are equipped with a lift handle behind the collar.

A whistle is demanded to classify as a lifejacket.

### CRUTCH STRAP

The smaller sizes are fitted with twin buckles for the crutch strap for greater adjustment possibilities. Beaver tail crutch strap for more comfort. Applies to sizes up to 15 kg.

The Original has a larger neck opening than Pro Sailor and Skipper. Beaver tail crutch strap on the smaller sizes. Features include retro-reflective patches, whistle and a grab handle under the collar. Five year guarantee.

**Size:** toddler 3-15, child 15-30 kg.

## SPECIALIST BYOUANCY AIDS

If you are water skiing, dinghy sailing or taking part in any other water sport it is essential to have a buoyancy aid customized for the activity. The new Elite vest is specially developed for dinghy racing. A slick buoyancy aid with great adjustment possibilities for a perfect fit, light weight and comfortable to wear.

Instead of a zip closure the Watersports has several robust buckles that adjust to the best possible fit ensuring that the vest cannot ride up when you are in the water. The Watersports also has padded side panels to protect against high impact falls. Also suitable for jetski with handle on the front for the passenger to hold on to.

Our specialist buoyancy aids are approved to 50N standard, this means that a buoyancy aid will keep you afloat with a good margin of safety. A 50N product is suitable for swimmers and for persons over 25 kg.

## ALL PURPOSE BUOYANCY AIDS

An all-round buoyancy aid designed to suit general boating activities on or near water. When selecting an all-purpose vest the two most important parameters are fit and design, it should fit comfortably to suit your specific needs.

All-round buoyancy aids are approved to the 50N standard, this means that a buoyancy aid will keep you afloat with a good margin of safety. 50N products are suitable for swimmers and for persons over 25 kg.

For all our buoyancy aid models that have a waistband there is a retro-fit crutch strap available as an accessory, this when fitted prevents the buoyancy aid riding up in the water, making it easier to swim. A lot of kids have fun swimming with a buoyancy aid and the crutch strap ensures it does not slide up over the arms.

What distinguishes the different models besides colour is the design and cut, some models have segmented panels, allowing the buoyancy aid to follow the contours in your body, providing a better and more comfortable fit. Other models have zipped pockets for storage of keys or personal effects.

When selecting any of our products one should bear in mind that the most important feature is the fit. The weight range on the jacket label is only an indication, so if your weight is say 75 kg but a vest that is 50-70 kg is the better fit, then that it is the one to select. An oversized buoyancy aid will possibly ride up in the water and impair your swimming capabilities.

## ALL PURPOSE BUOYANCY AIDS

Super Soft II orange  
art no 5854

### SUPER SOFT II

Super-soft floatation material with multi-panels and elasticated fabric side panels ensure an excellent fit. Two zipped outer pockets. Secured with front zip, waistband and bottom ties. Five year guarantee.

## FLOTATION CLOTHING

The Floatation clothing range are buoyancy aids that are designed to be used and worn as conventional clothing. Jackets and gilets in various models are tested and are approved to the 50N standard, this means that a buoyancy aid will keep you afloat with a good margin of safety. 50N products are suitable for swimmers.

The vests in the gilet style are suitable to wear on the water as well as near the water, with practical outside and inside pockets. The Top Float is designed for recreational use and features ventilation zips under the arms for cooling in warm conditions.

## FLOTATION CLOTHING

**Size:** XS, S, M, L, XL, XXL.

High top trousers black  
art no 5170

## FLOTATION SUITS

A flotation suit is a safe and practical choice for going out on the sea when it's cold or if you are venturing out on the ice. Flotation suits are manufactured with wind and waterproof outer material with taped seams. The sleeves have an inner PU cuff that tightens to avoid water ingress and an outer cuff that can be tightened over gloves. At the bottom of the legs there is an outer tightening strap with no inner cuff to allow trapped air to escape if you fall in the water head first. For when you leave the water there are mesh drains in the leg lining. All models have adjustable internal braces, multiple fleece-lined outside pockets, inside pocket, lined hood and a comfortable lining. Apart from protection against hypothermia our flotation suits also protects against the first cold shock you get when you fall in cold water.

### AMAROK / POLARIS / HI-VIS

Soft and comfortable flotation suit. Fully waterproof with taped seams. Four outer pockets and two fleece-lined outside pockets. Internal braces. Approved according to the same standard as a buoyancy aid. Remains soft and comfortable to wear at very low temperatures. Buoyancy: 80N. Two year guarantee.

**Size:** XS 50-60, S 60-70, M 70-80, L 80-90, XL 90-100, XXL 100+, XXXL 100++ kg

**Size child:** child 25-30, child 30-40, junior 40-50 kg

Amarok unisex red/black  
art no 5792

Polaris unisex black  
art no 5790

Hi-Vis unisex black/UV-yellow  
art no 5791

Flotation suits besides being tested to 50N standard are also tested and approved to EN ISO 15027 for thermal protection. This requires test subjects in flotation suits to be immersed in water at 10 degrees Celsius for two hours, during this period they must not lose more than two degrees in body temperature. **The test subjects in Baltic flotation suits temperature loss averaged 1.1 degrees.**

Hi-Vis is equipped with pockets on the knees to add cushioning. Approved to high visibility workwear standard EN 20471.

## SAFETY LINES & HARNESSSES

All our harnesses and safety lines are approved according to EN/ISO 12401. The harnesses are made from UV-stabilized polyester, and safety lines from polyamid. Hooks are stainless steel. Five year guarantee.

## LIFEBUOYS & M.O.B. SYSTEMS

We have different models of lifebuoys for different purposes.

**Swedebuoy** and **Rescue Sling** are stored to be released into the water and trawled around the distressed person who grabs the floating line.

The crew can then pull the distressed to the boat and use the Swedebuoy/Rescue Sling to help them back on board.

The **horseshoe combination** is for use in calmer environments, for example, in cases of overboard near land or in port.
